

## **NEWS**

Ascari Cars Ltd, the Banbury UK based car manufacturer has selected Surface Transforms' **SystemST** carbon ceramic brake discs as standard equipment on the all new A10 model.

The A10 is the latest car to come out of the Ascari stable, succeeding the KZ1. The car is equipped with a 4941cc, naturally aspirated V8 engine, generating 625 BHP at 7500 rpm. Weighing a mere 1250Kg, the car boasts a 0-60mph time of just 2.8 seconds, 0-100 mph of 5.8 seconds and a top speed of 215 mph.

Carbon-ceramic brake technology fits well with the other carbon fibre based lightweight materials used in the construction of both the chassis and the bodywork of this £350,000 super-car.
