

Surface Transforms Display SystemST Products at Autosport International

Surface Transforms plc displayed the SystemST Carbon-Ceramic brake product at the Autosport International Exhibition at the NEC in Birmingham on the 10th and 11th of January 2007.

The stand featured displays of various sizes of discs and a multimedia presentation showing the advantages of the SystemST product. The centre piece of the display was the 220 mph, £350,000 Ascari A10 prototype fitted with SystemST carbon-ceramic brakes.

SystemST products also featured on the stand of StopTech, the American Brake upgrade manufacturer, who showed-off the 355 mm diameter SystemST disc as fitted to their Dodge Viper big-brake upgrade kit.

Surface Transforms plc would like to take this opportunity to thank Ascari Cars for the loan of the A10 for the duration of the show.
