Weber Sportcars, the Swiss based car manufacturer has selected Surface Transforms' **SystemST** carbon ceramic brake discs as standard equipment on the all new super-car.

The car which is due to be unveiled at the Top Marques Exhibition at Monte Carlo in April is equipped with a 7210cc, supercharged V8 engine, generating an as yet undisclosed power level. Weighing a mere 1100Kg, the car boasts an estimated 0-62 mph time of just 2.7seconds and a top speed of 249 mph.

Carbon ceramic brake technology fits well with the other carbon fibre based lightweight materials used in the construction of the bodywork of this yet to be launched super-car.
